Jefferson County RWD #1 2013 CCR Report

Is my water safe? We are pleased to present this year's Annual Water Quality Report (Consumer Confidence Report) as required by the Safe Drink ing Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our best allies. Last year, we conducted tests for over 80 contaminants. We only detected 4 of those contaminants and found only 1 at a level higher than the EPA allows. The City of Waurika, City of Duncan, and City of Comanche detected additional contami nants that have been included with our report As we informed you at the time, our water temporarily exceeded drinking water standards. (For more in formation see the section labeled Violations at the end of the report.)

Do I need to take special precautions? Some people may be more vulnerable to contaminants in drinking water than the general population Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791)

Where does my water come from? During 2014 we brought our 3rd well online. 95% of our water is now pumped from our wells. The other 5% comes mainly from the City of Waurika. However, we stil contract to buy water from the City of Duncan, and City of Comanche. The well water has brought ou TTHM levels down. Only the portion that is bought from the City of Waurika, Duncan, and Comanche is out of compliance, because their water is not in compliance with TTHM standards.

Source water assessment and its availability: 95% of our water comes from well water.

Why are there contaminants in my drinking water? Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap water and bottled water) include F rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity: microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oi and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwate runoff, and residential uses; organic Chemica Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Adminis-

same protection for public health. How can I get involved? If you have any guestions or concerns you can contact our office at 580-963

Violations and Exceedances

TTHMs [Total Trihalomethanes]

ne people who drink water containing trihalomethanes in excess of the MCL over many years may experience oblems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer. Jefferson RWD # 1 purchases some water from the City of Waurika, City of Comanche, and City of Duncan. Both these towns are out of compliances concerning TTHM level The District has installed 3 wells, which has decreased e reliance on other cities for water. The well water should bring the system into compliance

Beta/photon emitters

Certain minerals are radioactive and may emit forms of radiation known as photons and beta radiation. Some people who drink water containing beta and photon emitters in excess of the MCL over many years may have an increased risk of getting cancer. EPA considers 50 pCi/l to be the level of concern for beta particles. The City of Waurika reported Beta photon emitters of 7.82 nrem/yr, City of Comanche reported 7.346 nrem/yr, and City of Duncan reported a level of 12.77 nrem/yr of Beta/photon emitters.

The City of Waurika also received a violation for failing to provide a 2014 CCR report The City of Waurika, City of Comanche, and City of Duncan all had violations for being in excess of TTHMs

	Unit Descriptions	
	Term	Definition
,	ug/L	ug/L: Number of micrograms of substance in one liter of water
1	ppm	ppm: parts per million, or milligrams per liter (mg/L)
	ppb	ppb: parts per billion, or micrograms per liter (μg/L)
	pCi/L	pCi/L: picocuries per liter (a measure of radioactivity)
;	mrem/yr	mrem/yr: millirems per year (a measure of radiation absorbed by the body)
	NTU	NTU: Nephelometric Turbidity Units. Turbidity is a measure of the cloudiness of the water. We monitor it because it is a good indicator of the effectiveness of our filtration system.
	NA	NA: not applicable
1	ND	ND: Not detected
	NR	NR: Monitoring not required, but recommended.

MPL: State Assigned Maximum Permissible Level 3161 or visit our webpage jeffersonrwd1.org Description of Water Treatment Process: Your water is treated by disinfection. Disinfection involves the addition of chlorine or other disinfectant to kill dangerous bacteria and microorganisms that may be in the water. Disinfection is considered to be one of the major public health advances of the 20th century.

Water Conservation Tips: Did you know that the average U.S. household uses approximately 400 gallons of water per day or 100 gallons per person per day? Luckily, there are many low-cost and no-cost ways to conserve water. Small changes can make a big difference – try one today and soon it will become second nature. •Take short showers - a 5 minute shower uses 4 to 5 gallons of water compared to up to 50 gallons for a bath. •Shut off water while brushing your teeth, washing your hair and shaving and save up to 500 gallons a month. •Use a water-efficient showerhead. They're inexpensive, easy to install, and can save you up to 750 gallons a month. •Run your clothes washer and dishwasher only when they are full. You can save up to 1,000 gallons a month. •Water plants only when necessary. •Fix leaky toilets and faucets. Faucet washers are inexpensive and take only a few minutes to replace. To check your toilet for a leak, place a few drops of food coloring in the tank and wait. If it seeps into the toilet bowl without flushing, you have a leak. Fixing it or replacing it with a new, more efficient model can save up to 1,000 gallons a month. •Adjust sprinklers so only your lawn is watered. Apply water only as fast as the soil can absorb it and during the cooler parts of the day to reduce evaporation. •Teach your kids about water conservation to ensure a future generation that uses water wisely. Make it a family effort to reduce next month's water bill! •Visit www.epa.gov/ watersense for more information.

Cross Connection Control Survey: The purpose of this survey is to determine whether a cross-connection may exist at your home or business. A cross connection is an unprotected or improper connection to a public water distribution system that may cause contamination or pollution to enter the system. We are responsible for enforcing cross-connection control regulations and insuring that no contaminants can, under any flow conditions, enter the distribution system. If you have any of the devices listed below please contact us so that we can discuss the issue, and if needed, survey your connection and assist you in isolating it if that is necessary.

•Boiler/ Radiant heater (water heaters not included) •Underground lawn sprinkler system •Pool or hot tub (whirlpool tubs not included) •Additional source(s) of water on the property •Decorative pond •Watering trough

Source Water Protection Tips: Protection of drinking water is everyone's responsibility. You can help protect your community's drinking water source in several ways: •Eliminate excess use of lawn and garden fertilizers and pesticides – they contain hazardous chemicals that can reach your drinking water source. •Pick up after your pets. •If you have your own septic system, properly maintain your system to reduce leaching to water sources or consider connecting to a public water system. •Dispose of chemicals properly; take used motor oil to a recycling center. •Volunteer in your community. Find a watershed or wellhead protection organization in your community and volunteer to help. If there are no active groups, consider starting one. Use EPA's Adopt Your Watershed to locate groups in your community, or visit the Watershed Information Network's How to Start a Watershed Team. •Organize a storm drain stenciling project with your local government or water supplier. Stencil a message next to the street drain reminding people "Dump No Waste - Drains to River" or "Protect Your Water." Produce and distribute a flyer for households to remind residents that storm drains dump directly into your local water body. Other Information: Jefferson County Rural Water # 1 purchases some water from the City of Waurika, City of Duncan, and City of Comanche. We have included the results from the CCR's of these cities in our data. The highest detected amounts for contaminants were used in the data. CCR's for the City of Waurika, City of Duncan, and City of Comanche can be viewed along with Jefferson County Rural

Additional Information for Lead: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Jefferson County RW & SD #1 is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Water Quality Data Table: In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table.

MERCHANDISE

FOR SALE: 44" x 66" oak dining table with 6 chairs (newly covered), very good condition. 580-467-1852 or 439-6002

FOR SALE: Charles Schneider custom-made camelback sofa, shades of blue with small mauve floral design. Excellent condition. \$125. 580-529-2467.

LAWNWORKS LLC: fullservice lawn and landscape maintenance, installation and tree service. Servicing Lawton, Elgin, Medicine Park, Lake Lawtonka and surrounding areas. 100% satisfaction guaranteed, free estimates. Call 580-512-7889.

Mowers

FOR SALE: Kubota riding lawn mower TC 1860, 60" cut, diesel motor, \$2100.580-251-1020.

Tools

FOR SALE: Shop battery charger, \$50. Call 580-252-3066

FOR SALE: Air-operated garage-model grease gun, 5 gal., \$100. Call 580-252-3066 or 580-736-4152.

FOR SALE: Retractable air hose reel, \$40. Hand-operated air hose, \$25. Call 580-252-3066 or 580-736-4152.

LOST! South of Cache, Hereford bull branded with a D on left hip, Brangus cow with ear tag #38, and two black calves. Lost during the flooding. Please call 580-512 3655.

MISSING COWS: Two solid black cows from when West Cache Creek got out of bank. B backwards F brand on left hip. White ear tag #1 & #5. 580-704-7145.

Boats/ Watercraft

FOR SALE: 1982 Ranger boat with Ranger trailer. 1985 Evenrude motor 140, very clean, \$6,000. 580-467-2408.

Cars

FOR SALE: 1938 Chevy (4door) street rod. Call for details, 580-786-9006 or 580- FOR SALE: Plank-style run-252-3066.

FOR SALE: Rotary car lift (needs cylinder), \$1,000. Call for info. 580-786-9006 or 580-252-3066.

Cycles and ATVs

1986 Kawasaki 1000 Police Special. Needs battery. Tagged through December 2015. \$4,000 Call 405-476-3057.

2005 HARLEY-DAVIDSON Fat-Boy, over \$3,000 in chrome and accessories. Blue ghost flames paint, Mustang seat, custom wheels, floor boards. Always garaged, 13,800 mi, \$12,500 OBO.580-736-4225.

TRANSPORTATION

FOR SALE: Polaris 2x4 Trailblazer 4-wheeler. 405-818-0545 or 580-875-2297.

FOR SALE: 2003 black Harley-Davidson Electra Glide Standard, 100-year-anniversary bike. Fuel injected; new tires installed 2-7-15; fresh oil, filter change; have owned 10 years. 67,800 miles. \$6,800. 940-631-7733.

Used Bombardier Quest XT 650 Rotax, low hours but bad tranny. \$1,499 OBO. Trades possible. 580-583-0193.

'94 Suzuki Samurai, good running. Asking \$1,500 OBO. More information, 580-595-

Golf Carts

GOLF CARTS for sale, new and used. Parts and service. Trailers available, as well. 580-656-2314.

Recreational **Vehicles**

FOR SALE: 1991 Holiday Rambler Class A motorhome, \$11,999. Excellent condition. Less than 50K miles. New carpet. All the bells and whistles. Call Bill for particulars, 925-864-9428

FOR SALE 1993 Wilderness bumper-pull 22" travel trailer. Good condition. Everything works. \$2,900. Call for more details. 580-492-5776.

FOR SALE: 1995 Holiday Rambler Imperial 5th wheel, 38', clean, well kept, \$13,500. 580-467-2408

2000 Mercury Villager, complete good title. Doesn't run, \$200. 580-243-6883.

Trucks and SUVs

FOR SALE: 1992 GMC 3/4-ton extended cab, 1979 Chevy 1-ton, both run and drive great. \$3,300 & \$2,500 or trade. 580-475-8096.

2005 CHEVY SILVERADO LS, 5.3 liter engine, approx. 106,000 miles, loaded, extended cab, 6.5-ft. bed w/ liner, trailer hitch, 2WD, new tires. \$8,995. By appointment only. 580-467-2530

FOR SALE: 2007 GMC Yukon SLE, in good condition. 580-255-6968 or 475-7838.

1940 Chevy 1/2-ton truck. \$2,999, All original, all of it's there. Just needs TLC. Willing to trade for fuel- efficient car, hot tub, or RV/trailer. 580-583-5573

1994 Ford F-250 XLT, crew cab, diesel, 2WD. Super clean, auxiliary fuel tank, 45 gallons. \$7,800 OBO. Roger Germany, 580-475-6763.

16-gallon auto LPG, tank, \$199. 10"x60" propane tank for injection into a diesel. Gauge, safety fill valve, vent, hose, etc. X-monitor available, they were over \$1450 new. \$499. 580-583-5573

International DUMP TRUCK, \$8,799. 10 wheeler, 13-speed, 290, Cummins, 14' gravel box, good rubber, new paint. 580-583-0193

Mitsubishi mini PICKUP, 5-speed transmission, high/ low shift, custom floor mats, factory bumper with hitch, hub caps and good tires. Excellent condition! 580-512-

ning boards. No wear. Came off of 2012 crew cab Silverado. \$295. 580-355-9069 or 351-7919.

FOR SALE: 1997 Ford F150 XL pickup with 79,000 miles, auto transmission, V6 motor. \$4,500. Call 580-704-7755.

FOR SALE: 2009 Chevy Silverado 4WD, good condition, \$9,000 OBO. 580-875-2027.

2004 GMC Envoy XL, 95,127 miles, 1 owner, new tires, clean and runs good. 580-313-0196, leave a message.

Rough Country brand front bumper, fits '07 Dodge, \$500. 580-512-6762.

Find out how little changes add up to big savings at TogetherWeSave.com.

Cotton County Rural Water District #2 2014 **Annual Drinking Water Quality Report**

Spanish (Espanol)

Este informe contiene informacion muy importante sobre la calidad de su agua potable. Por favor lea este informe o comuniquese con alguien que pueda traducir la informacion.

Is my water safe?

We are pleased to present this year's Annual Water Quality Report (Consumer Confidence Report) as required by the Safe Drinking Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our best allies. Last year, we conducted tests for over 80 contaminants. We only detected 11 of those contaminants, and found only 2 at a level higher than the EPA allows. As we informed you at the time, our water temporarily exceeded drinking water standards. (For more information see the section labeled Violations at the end of the report.) Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Where does my water come from? Cotton County Rural Water District #2 utilizes ground water that comes from wells located in Cotton and Comanche counties

Source water assessment and its availability Copies of the Source Water Assessment report are available at our office located at 229 N. Broadway Walters, OK

Why are there contaminants in my drinking

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity: microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses; organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FĎA) regulations establish limits for contaminants in bottled water which must provide

the same protection for public health. How can I get involved?

The Board of Directors for Cotton County Rural Water District #2 meet the second Tuesday of each month at 229 N. Broadway Walters, OK 73572 at 7:30 PM.

Description of Water Treatment Process Your water is treated by disinfection. Disinfection involves the addition of chlorine or other disinfectant to kill dangerous bacteria and microorganisms that may be in the water. Disinfection is considered to be one of the major public health advances of the 20th century.

Water Conservation Tips

Did you know that the average U.S. household uses approximately 400 gallons of water per day or 100 gallons per person per day? Luckily, there are many low-cost and no-cost ways to conserve water. Small changes can make a big difference - try one today and soon it will become second nature.

 Take short showers - a 5 minute shower uses 4 to 5 gallons of water compared to up to 50 gallons for a bath. Shut off water while brushing your teeth, washing your hair and shaving and save up to 500 gallons a month. Use a water-efficient showerhead. They're inexpensive, easy to install, and can save you up to 750 gallons a

 Run your clothes washer and dishwasher only when they are full. You can save up to 1,000 gallons a month. Water plants only when necessary.

•Fix leaky toilets and faucets. Faucet washers are inexpensive and take only a few minutes to replace. To check your toilet for a leak, place a few drops of food coloring in the tank and wait. If it seeps into the toilet bowl without flushing, you have a leak. Fixing it or replacing it with a new, more efficient model can save up to 1,000 gallons a

 Adjust sprinklers so only your lawn is watered. Apply water only as fast as the soil can absorb it and during the cooler parts of the day to reduce evaporation.

 Teach your kids about water conservation to ensure a future generation that uses water wisely. Make it a family effort to reduce next month's water bill!

 Visit www.epa.gov/watersense for more information. Cross Connection Control Survey

The purpose of this survey is to determine whether a cross-connection may exist at your home or business. A cross connection is an unprotected or improper connection to a public water distribution system that may cause contamination or pollution to enter the system. We are responsible for enforcing cross-connection control regulations and insuring that no contaminants can, under any flow conditions, enter the distribution system. If you have any of the devices listed below please contact us so that we can discuss the issue, and if needed, survey your connection and assist you in isolating it if that is necessary.

Boiler/ Radiant heater (water heaters not included) Underground lawn sprinkler system Pool or hot tub (whirlpool tubs not included)

 Additional source(s) of water on the property Decorative pond Watering trough

Source Water Protection Tips

Protection of drinking water is everyone's responsibility. You can help protect your community's drinking water source in several ways: Eliminate excess use of lawn and garden fertilizers and

pesticides – they contain hazardous chemicals that can reach your drinking water source. Pick up after your pets.

•If you have your own septic system, properly maintain

your system to reduce leaching to water sources or consider connecting to

•Dispose of chemicals properly; take used motor oil to a recycling center.
•Volunteer in your community. Find a watershed or wellhead protection organization in your community and volunteer to help. If there are no active groups, consider starting one. Use EPA's Adopt Your Watershed to locate groups in your community, or visit the Watershed Information Network's How to Start a Watershed Team.

Organize a storm drain stenciling project with your local government or water supplier. Stencil a message next to the street drain reminding people "Dump No Waste - Drains to River" or "Protect Your Water." Produce and distribute a flyer for households to remind residents that storm drains dump directly into your local water body.

Results of random monitoring

Radon is a radioactive gas that you can't see, taste, or smell. It is found throughout the U.S. Radon can move up through the ground and into a home through cracks and holes in the foundation. Radon can build up to high levels in all types of homes. Radon can also get into indoor air when released from tap water from showering, washing dishes, and other household activities. Compared to radon entering the home through soil, radon entering the home through tap water will in most cases be a small source of radon in indoor air. Radon is a known human carcinogen. Breathing air containing radon can lead to lung cancer. Drinking water containing radon may also cause increased risk of stomach cancer. If you are concerned about radon in your home, test the air in your home. Testing is inexpensive and easy. Fix your home if the level of radon in your air is 4 picocuries per liter of air (pCi/L) or higher. There are simple ways to fix a radon problem that aren't too costly. For additional information, call your state radon program or call EPA's Radon Hotline (800-SOS-RADON). Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Cotton County Rural Water District #2 is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/

Additional Information for Nitrate

Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than six months of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant, you should ask for advice from your health care provider. **Water Quality Data Table**

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table.

Parting Shot

The wettest May on record meant journeyman lineman Chad Cowan, left, and heavy equipment operator Darrell Loveday spent a lot of time with shovels. The trencher Loveday normally uses for large and small digs was too heavy for the saturated ground. This meant all new services requiring long trenches were postponed until the ground dried and the trencher could be used without leaving huge ruts along the work path.
